Intro

This #PrussiaGate article is nothing more than a mind excursion into several interesting periods in history over the last century. We will casually observe these events to see if there are any strange coincidences happening today that may require further scrutiny.

We will conclude the article with a pitch for a fantastical SciFi movie, based on our casual observations. You are welcome to skip to the end to get a brief overview, but we believe you will find our observations leading up to this pitch quite interesting.

Enjoy.

A Slow, Unconventional Pedophile

We begin our story with an unashamed and notorious pedophile, and Nobel prize recipient, Dr. Daniel Carleton Gajdusek:

(1:09)

Dr Carlton Gajdusek on boys coming to his bed

Consider his statement, *“Now, come on; that’s the rule of the game”!*

One might be currently wondering what kind of freak show this scumbag was associated with. We are not entirely sure of what sort of “game” Gajdusek is referring to, but there are two startling comments he makes in his one-minute defence of pedophilia.

How Brainwashed You Are?

The first point of note is that Gajdusek declares the interviewer to be brainwashed when he referred to the practice of sex with boys as unwanted, and therefore rape. Gajdusek’s belief that the interviewer is brainwashed is reminiscent of the men who founded the German “Wandervoegel” movement.

In our Urania series, we outlined how the birth of the gay rights movement, the transgender movement, and the plight for the legalization of pedophilia all originated in Germany. When the pedophiles realized that the gay movement would not legalize sex with young boys, they were flung into fits of rage, and began their own separate campaign. Luminaries such as Karl Fischer, Adolph Brand, Benedict Friedlander, Hans Blueher, Wilhelm Jansen, and many others banded together to form the German boy-scout movement, which became known as the “Wandervoegel”.

Wilhelm Jansen became an influential leader in the *Wandervoegel*, but rumors of his homosexuality disturbed German society. In 1911, Jansen addressed the issue in a circular to *Wandervoegel* parents. Jansen told them, "As long as they conduct themselves properly with your sons, you will have to accustom yourselves to the presence of so-called homosexuals in your ranks" (Mills:167).

Hans Blueher further substantiated the fact that the movement had become a vehicle for homosexual recruitment of boys with his publication of *The German Wandervoegel Movement as an Erotic Phenomenon* in 1914 (Rector:39f). Mills writes,

1

The *Wandervoegel* was started in the late 1800s by a group of homosexual teenagers. Its first adult leader, Karl Fischer, called himself "*der Fuehrer*" ("the Leader") (Koch:25f).²

The extended-arm "*Sieg Heil*" salute, for example, was a ritual of the *Wandervoegel* ("Wandering Wildfowl" or "Rovers"), a male youth society which became the German equivalent of the Boy Scouts.

The *Wandervoegel* and other youth organizations were later merged into the Hitler Youth (which itself became known among the populace as the "Homo Youth" because of rampant homosexuality. - Rector:52).³

2

The kultur and philosophy behind the *Wandervoegel* was the *Ariosophy* of Guido von List and the esotericism of Jorg Lanz von Liebenfels. Liebenfels claimed to have directly given Hitler his ideas, while the Runes in von List's book are where the Nazi movement adopted the Swastika, the SS lightning bolts, the "Sieg heil" and "mein Fuhrer". Von List and Liebenfels were both known to enjoy playing with young boys, and both men believed that the Aryan race had been *brainwashed* and weakened by Judeo-Christian culture.

The second point emerging from the Gajdusek video is when he declared that "*all boys want a lover*". In addition to suggesting that the interviewer was *brainwashed*, Gajdusek may have been fantasizing about the days of Ernst Rohm and his gang at the bar in Munich named the *Bratwurstgloeckl*; a place where young teenage boys were so brutally raped by Rohm and his entourage. The only place the victims could seek treatment in Germany was with Dr. Magnus Hirschfeld; the same man who performed the first sex-change operations. Hirschfeld's sex institute housed many of the dark sexual crimes of key Nazi leaders.

Some of the injuries sustained by children at the hands of Nazis were so horrific, that a concoction of surgeries and mind-altering drugs were needed to try and get the victim to forget their ordeal. It is no surprize that within two weeks of the Nazis seizing total power, that Hirschfeld's Sex Institute was the first target of elimination:

Hirschfeld's Sex Institute held over 40,000 pieces of evidence relating to the sexual perversions of the Nazis. Once in power, the institute and all its evidence was immediately "destroyed".

[3](#)

How did Gajdusek inherit the concepts of radical Uranianism and find it so acceptable to practice pederasty with 300-400 boys? The answer to that question may lie with who he associated with in his professional life:

Carlton Gadjuske, National Institute of Health director at Ft. Detrick, noted, "In the facility I have a building where more good and loyal Communists, scientists from the USSR and mainland China work, with full passkeys to all the laboratories, than there are Americans. Even the Army's infectious disease unit is loaded with foreign workers not always friendly nationals."

[4](#)

In our series, Trust Ze Science, Council of the Gods and Urania, we provided evidence of how many key players in Nazi Germany migrated to America under the guise of Operation Paperclip. In 1951, Gadjusek was drafted into the military and served as a research virologist. Was this where Gadjusek was influenced by the Swastika boys and their pederastic beliefs and practices?

What exactly did Gadjusek's career as a Nobel prize winning biologist actually entail?

A Kuru-ous Life

Gadjusek was a studious boy, and in 1943, amidst the brutality and chaos of WWII, he graduated from the University of Rochester with a degree in biophysics. From there, he attended **Harvard**, where he received his MD. After that, he got his post-doctoral fellowship at California Institute of Technology. Obviously a proven academic, things got really interesting for Gadjusek when he was drafted as a research virologist at Walter Reed. [5](#)

At this moment, the academic brain of Gadjusek was immersed in post WWII experiments; predominantly overseen by ex-Nazi scientists that were imported via Operation Paperclip.

Gadjusek became obsessed with viral diseases, fevers and plagues. When his official military service came to an end, Gadjusek did not know what to do with all the experience he gained as a military research virologist. He decided to move to the other side of the world, and join a prestigious research facility in Melbourne, Australia.

Laugh My Brains Out

Despite Gajdusek's outing as a serial pedophile, the Australian Academy of Science still celebrates the contributions made by this man. In 1955, he worked in Melbourne for the Walter and Eliza Hall Institute (WEHI):

[6](#)

We must never forget that the most severely locked-down place on the planet during the pandemic, was Melbourne. The Victorian Premier, Dan Andrews, sought advice from the state's top medical researchers, and WEHI is considered one of the world's top research facilities with respect to infectious diseases and immune disorders. [7](#)

During the pandemic, Dan Andrews was empowered by the scientism of WEHI, and morphed into a genetic cocktail which tasted more like Stalin, Hitler, Mao and Pol Pot. Throughout the 262 days of lockdown, he concocted demands on the public which were borderline comical (0:16 seconds):

Andrews announced people will not be permitte...

It must be noted that Dan Andrews is also a proud supporter of the CCP's "One Belt, One Road" initiative. In 2016, he and the WEHI established a medical research partnership with the CCP.

Australia-China joint venture to fast-track discoveries

22 September 2016

Victorian Premier Daniel Andrews has announced plans to establish a translational research centre in Nanjing, following the signing of a memorandum of understanding between the Walter and Eliza Hall Institute, University of Melbourne, Cancer Trials Australia and China's prestigious Nanjing University in Jiangsu province.

We are not sure what discoveries WEHI and the CCP have made since 2016, but that might become clearer as our story unfolds.

Regardless, why did Gajdusek move straight from the US military to join up with the WEHI?

For the fresh brains, of course!!

[From 1915 – 1975, Papua New Guinea was a territory under the trust of the United Nations, and it was being administered by Australia.](#)

In the 1950s, gold production was in high demand. Papua New Guinea has bucket-loads of gold deposits, and ambitious Aussies scrambled to New Guinea to take part in a potential new gold rush. There was just one problem; New Guinea is perhaps one of the most inhospitable places on Earth. Snakes, crocodiles, sharks, giant monitor lizards, dengue fever and malaria are serious dangers, but they are nothing compared to the dangers posed by the natives. They were tough as nails, completely undeveloped and many had never seen Europeans before.

[9](#)

People risked their lives to go to New Guinea in search of fortunes; the region made America's Wild West look like a child's playground. What's-more, many New Guinean natives still enjoyed the practice of cannibalism.

Foreigners who were brave enough to reside in New Guinea began to notice a few strange things about the natives. One of them was their custom to eat dead people as part of funeral proceedings. It was this peculiar custom that caught the eye of Gajdusek and his peers:

When People Ate People, A Strange Disease Emerged

SEPTEMBER 6, 2016 · 11:23 AM ET

By [Rae Ellen Bichell](#)

In 1962, a local leader in the Eastern Highlands of Papua New Guinea asks Fore men to stop the sorcery that he believes is killing women and children.

Courtesy Shirley Lindenbaum

When researchers made their way to those villages in the 1950s, they found something disturbing. Among a tribe of about 11,000 people called the Fore, up to 200 people a year had been dying of an inexplicable illness. They called the disease *kuru*, which means "shivering" or "trembling."

Once symptoms set in, it was a swift demise. First, they'd have trouble walking, a sign that they were about to lose control over their limbs. They'd also lose control over their emotions, which is why people called it the "laughing death." Within a year, they couldn't get up off the floor, feed themselves or control their bodily functions.

Australian anthropologist, Shirley Lindenbaum, was one of the first to observe the practices of the native people, and urged scientists to take a closer look at the “kuru” disease that was taking out entire communities.

Since Australia administered the New Guinea territory in the 1950s, they had direct and legal access to the natives, their dead, and their brains. Therefore, the WEHI and Gajdusek could receive the freshest of New Guinean bodies for analysis.

When Gajdusek acquired a fresh brain from a boy who recently died of kuru, he jumped straight on a plane back to America. He and his business partner, Joseph Gibbs, drilled holes in three healthy chimpanzees’ skulls, poured the kuru-infected brain puree into the chimps’ heads so that it had direct contact with their cerebellums, and began monitoring the apes to observe the “science”.

For about two years, nothing happened. However, at the two year mark, things changed rapidly. One of the chimps began to have trembling fits. She began to lose her balance, her jaw began to droop, and she became slower and slower. Soon after, the other chimps followed a similar trajectory. Their decline was over a period of a few months, and although they wanted to eat, they couldn’t coordinate their movements or even digest their food. They became emaciated, unable to cognitively register anything.

During the observation toward certain death, Gajdusek noted:

October 7, 1965: “Georgette remains apathetic—though appetite is good. I am firmly convinced that this animal will never recover....My life is getting to be hell for fear of sudden death or complicating secondary infection—I think we must sacrifice very soon....” (8)

[11](#)

The chimps had contracted kuru, and suffered a terrible end to their lives.

On the upside, Gajdusek’s time in Melbourne and the acquisition of a fresh kuru-infected brain from New Guinea launched his career to new heights. He had successfully transmitted kuru disease from a human to a chimpanzee, proving the

existence of a new type of transmissible “virus”. The gang over at Nobel were suitably impressed:

THE NOBEL PRIZE

[Nomination](#)[Alfred Nobel](#)[News & insights](#)[Events](#)[Educational](#)[The Nobel Prize in Physiology or Medicine 1976](#)[D. Carleton Gajdusek - Lecture](#)

D. Carleton Gajdusek Nobel Lecture

Nobel Lecture, December 13, 1976

Unconventional Viruses and the Origin and Disappearance of Kuru

Kuru has led us, however, to a more exciting frontier in microbiology than only the demonstration of a new mechanism of pathogenesis of infectious disease, namely the recognition of a new group of viruses possessing unconventional physical and chemical properties and biological behavior far different from those of any other group of microorganisms.

[12](#)

Gajdusek’s career was on the up and up. He returned to the US, along with his adopted harem of young boys:

Daniel Gadjusek who won the Nobel Prize for medicine for his work on what are now called prion diseases. However, he used his research site in New Guinea to bring back and adopt over 50 young boys, many of whom he sexually abused and trafficked among his friends.

[13](#)

Release Ze Prion

Gajdusek was ecstatic at the discovery of a new type of infectious agent. By the 1980s, the science community worked out what was really happening:

But it wasn't a virus — or a bacterium, fungus, or parasite. It was an entirely new infectious agent, one that had no genetic material, could survive being boiled, and wasn't even alive.

As [another group](#) would find years later, it was just a twisted protein, capable of performing the microscopic equivalent of a Jedi mind trick, compelling normal proteins on the surface of nerve cells in the brain to contort just like them. The so-called "prions," or "proteinaceous infectious particles," would eventually misfold enough proteins to kill pockets of nerve cells in the brain, leaving the cerebellum riddled with holes, like a sponge.

[14](#)

It was an amazing discovery, one which is 100% fatal for the victim. Gajdusek continued his work with the NIH at Fort Detrick in **Frederick** County. One might begin to ask the question, could prions potentially be weaponized?

Prions: the danger of biochemical weapons

Eric Almeida XAVIER^{1*}

Bioterrorism is an emerging threat that is growing with the development of biotechnology. The risk of biochemical weapons falling into wrong hands can be devastating; it could contaminate cattle, humans and many other animal species leading to thousands of deaths and would lead to a global pandemic and economic crisis too.

[15](#)

Prions as Bioweapons?

Much Ado About Nothing; or Apt Concerns Over Tiny Proteins used in Biowarfare

By: James Giordano, Jennifer Snow,

Joseph DeFranco

09/13/2019

Defence IQ

Six Critical Problem Areas for National Security

1. **Synthetic Prions**: Methods to generate synthetic infectious prions have been optimized in attempts to better study and model the disease.
2. **Aerosolized Transmissibility**: TSEs can be transmitted through aerosolized prion-containing brain fragments.
3. **Gain of function (GOF)**: GOF research typically involves augmenting the transmissibility or virulence of a pathogen. In an attempt to better study prions, the (inherently long) incubation period has been experimentally shortened in order to permit more time-effective and – efficient studies.
4. **Increased knowledge of genomics and proteomics**: Progress in genomics and proteomics have allowed varied uses of gene editing technologies.
5. **Cross-species Transmissibility**: Studies have shown successful cross-species transmission of prion diseases in laboratory settings.
6. **Interactions with other pathogens**: Prions have been shown to influence the pathogenicity of other infectious agents (influenza A viruses, HIV-1, etc.)

[16](#)

It appears the weaponization of prions keeps more than a few military analysts awake at night. However, we must return to Gajdusek and the continuation of his research into kuru disease from the 50s to the 80s. His experiments have raised some eyebrows with respect to another, horrific infectious disease which emerged during the same period:

Kuru experiments triggered the emergence of pathogenic SIV_{mac}

AIDS 20(3):p 317-321, February 14, 2006.

However, we have collected and reassembled data that strongly suggest that highly invasive experimental manipulations, rather than casual contact, inadvertently gave rise to the highly pathogenic SIV_{mac} isolate, used in AIDS research from the 1980s to the present time.

These findings allowed us to identify a strong connection between the emergence of SIV_{mac} and SIV_{stm} and the experiments conducted by C. Gajdusek in numerous macaques and SM to study the pathogenesis of kuru in NHP.

In both Rh and STM, kuru experiments were carried out several years prior to the AIDS outbreaks. In fact, this time interval between the kuru experiments and the AIDS outbreak is equivalent to the incubation period of simian AIDS

[17](#)

SIV, or “Simian Immunodeficiency Virus”, is considered to be the ancestor of the humanized version, HIV:

Dating the Age of the SIV Lineages That Gave Rise to HIV-1 and HIV-2

Joel O. Wertheim , Michael Worobey

Published: May 1, 2009 • <https://doi.org/10.1371/journal.pcbi.1000377>

[18](#)

By the mid-1980s, the world was in collective shock as the AIDS epidemic ran rampant throughout the gay and drug-taking community. Previously healthy, young people deteriorated rapidly without warning, toward certain death. Television advertisements in 1987 were scaring the living daylights out of people about this “terrible plague” (1:04 minutes):

AIDS 'Grim Reaper' Ad Campaign (1987)

Suffice to say, medical researchers in the 1980s were working around the clock trying to work out just what the hell AIDS was. One of the first steps in research is observation. Some began to observe a frightening correlation (1987):

Kuru, AIDS and aberrant social behaviour

Epidemic slow infections in man

Aids (see footnote*) and kuru are slow infections. They are both caused by viruses of types that were not known to infect humans before epidemics gradually unfolded.

The essence of a slow virus disease is a prolonged asymptomatic incubation period of very variable length, during which the host is potentially, but persistently, infectious to others. Pathological changes accumulate imperceptibly, leading to major symptomatic pathology which does not remit and is eventually fatal.

Modern medicine contributed nothing towards the eradication of kuru. Gajdusek had first diligently tested the faulty hypothesis that it was a sex-linked, recessive, genetic disorder, although local missionaries and police constables had already concluded intuitively that it was an infectious disease transmitted by cannibalism.

Aids

There are weird and ominous similarities between the epidemiology of Aids and of kuru.

[19](#)

There is a common saying frequently used by the ‘Trust Ze Science’ community: “*Correlation is not causation*”.

This might be true, however those who are more mathematically minded also know that *causation must always present as correlation*. Therefore, observing correlations are the foundational keys that unlock scientific discovery.

In the above article, we note that the medically untrained missionaries and police had already observed that cannibalism was the cause of kuru. Gajdusek, however, wanted to first test out his theories about sex-transmission; perhaps with some of the young boys he later adopted.

Whatever the case, throughout the 1980s and beyond, debate raged over the origins of HIV/AIDS. As science caught up with the disease, its origins remained somewhat of a mystery, with several theories still persisting.

In [Trust Ze Science – Part I](#), we presented documents from the CIA.gov website which outlined the biological weapons research programs carried out by the CIA in Fort Detrick during the 1950s and 60s. The primary biological weapons program was named MKNAOMI.

Recall,

A major concern after the discovery of the records involved the disposition of a stockpile of BW agents and toxins maintained by Fort Detrick for possible Agency use. It was not known whether or not these materials had been destroyed along with the Army's BW stockpiles in response to Presidential Directives of November 1969 and February 1970. An unsigned memo raising the question of the disposition of Agency materials maintained by Fort Detrick posed the option of having it stored in a commercial laboratory.

[20](#)

If “*BW agents and toxins*” were maintained and stored, the discovery made by Gajdusek would almost-certainly be part of that “stockpile”. While the exact particle causing kuru may not yet have been discovered, they knew that the pureed brains of New Guinean cannibals contained the pathogen. Ergo, by using Gajdusek’s contacts in Australia, it was time to stock-up!

Gradually, scientific research would discover exactly what causes kuru. Prions were isolated as the fatal culprit that literally blows tiny holes through peoples’ brains until they die. We are unsure if this particular discovery was already known at Fort Detrick. However, if it was, a prion would potentially be the mother of all future bioweapons.

Was this the point in history when the prion was transferred and stored to a “commercial laboratory”?

WEF Dreams about Public-Private Partnerships

Part of the mantra adopted by the psychopathic WEF team at Davos is the desire to govern the world through “Public-Private partnerships”. What this effectively means is that the role of governance will be outsourced to unelected WEF companies, for profit and at the expense of We the People. However, we will save this nightmarish-scenario for another day, and return to our story about mysterious prions.

1971 was not just the year when President Nixon broke from the USD gold standard. With the Vietnam War still raging, he decided to declare another war:

2/28/2021

The "War on Cancer" at 50: The Most Fruitful Failure in Human History

by Judith L. Pearson

It is America's longest war, with casualties 100 times greater than all of the nation's armed combat combined. This year is the war's 50th anniversary. This deadly conflict is known as the war on cancer, declared by a beleaguered President Richard Nixon on December 23, 1971. Signing his National Cancer Act, Nixon promised an unprecedented \$1.6 billion over three years for cancer research. He also promised a cure by the nation's 1976 bicentennial.

[21](#)

Trying to find a cure for cancer is, of course, a very noble cause. The National Cancer Act promised a cure by 1976, which in hindsight is laughable. However, the billions of dollars also promised by President Nixon caught the eye of the corporate industrial complex:

The New York Times

SUNDAY, JUNE 25, 1972

*Litton to Run Cancer Research Lab***By HAROLD M. SCHMECK Jr.**

Special to The New York Times

WASHINGTON, June 24—
The National Cancer Institute
named a contractor yesterday
to operate its newly acquired
facilities at Fort Detrick, Md.,
and predicted that, by fall, the
former biological warfare lab-
oratories would be fully at work
toward the conquest of cancer.

The contract, for renovation,
management and operation of
the facilities, goes to Litton
Bionetics,

Viruses to Be Made

Viruses and special biologi-
cal materials will be produced
in large quantities for use, not
only at Fort Detrick, but also
at other laboratories doing
cancer research.

Large numbers of small ani-
mals, mostly rats and mice,
will be maintained for the re-
search at the newly acquired
laboratories in Maryland.

[22](#)

Therefore, if MKNAOMI carried out the mission of “having *it* stored in a commercial laboratory”, one of the best ways to do that would be to allow a commercial laboratory to take over the biological weapons laboratories. Nixon’s National Cancer Act allowed the government to set up the “National Cancer Institute” and join forces with Litton Bionetics – which could now use the biological weapons facilities as a “commercial laboratory”.

This public-private partnership allowed for MKNAOMI to become a commercial enterprise.

Furthermore, Litton Bionetics could use the old military bio-weapon labs to study all the viruses they wanted. No doubt, this research included the kuru brains acquired by Gajdusek.

Litton Bionetics was not a company that magically appeared on the scene. They had been working with the military since the 1960s:

According to a 1970 Congressional Record, Bionetics Research Laboratories, a subsidiary of Litton Industries, Inc., was sixth on the list of U.S. Army biological weapons (BW) contractors.(20) Later Congressional Records showed that Bionetics’s affiliate–Litton Systems, Inc., another subsidiary of Litton Industries, Inc.–was among the most frequently contracted companies involved in BW research and development between 1960 and 1970.(21)

The Litton Industries, Inc. 1977-1978 annual reports stated,

“In June, [1976] Litton Bionetics won the fourth renewal of its contract to manage the operations of the National Cancer Institute’s Frederick (Md.) Cancer Research Center.”(22)

[23](#)

Back in the 70s, with the full support of the US Government, Litton was the Amazon of deadly biological pathogens. Whatever deadly disease you needed at the time, Litton delivered, worldwide:

Furthermore, NCI staff reports revealed that Litton Bionetics had been granted the service contract to supply all NCI researchers, worldwide, with virtually every primate cancer research material requested, including seed viruses and viral hybrids, experimental reagents, and colony born monkeys, including *M. mulatta*, associated with the major monkey AIDS virus outbreaks in California's Davis Lab, and the 1967 Marburg virus outbreaks in three European vaccine production facilities and the African green *C. aethiops*.(24-26) Furthermore, from these publications, a list of the viruses and virus recombinants that Bionetics researchers developed, tested, and supplied to other NCI researchers during the 1960s and early 1970s was developed (see fig. 2).

[24](#)

One of the key researchers overseeing operations at Litton Bionetics was Dr. Robert Gallo. In *Trust Ze Science – Part I*, we showed a video in where Gallo was presented with his own research to accuse him of being part of a group that developed AIDS-like viruses. ([For reference, the 8 minute video can be seen again here](#))

Gallo claimed to be the co-discoverer of the virus that allegedly causes AIDS, known as HIV. However, Gallo's integrity was destroyed after a federal inquiry into his scientific practices.

Federal Inquiry Finds Misconduct By a Discoverer of the AIDS Virus

By PHILIP J. HILTS,
Published: December 31, 1992

After three years of investigations, the Federal Office of Research Integrity today found that Dr. Robert C. Gallo, the American co-discoverer of the cause of AIDS, had committed scientific misconduct. The investigators said he had "falsely reported" a critical fact in the scientific paper of 1984 in which he described isolating the virus that causes AIDS.

[25](#)

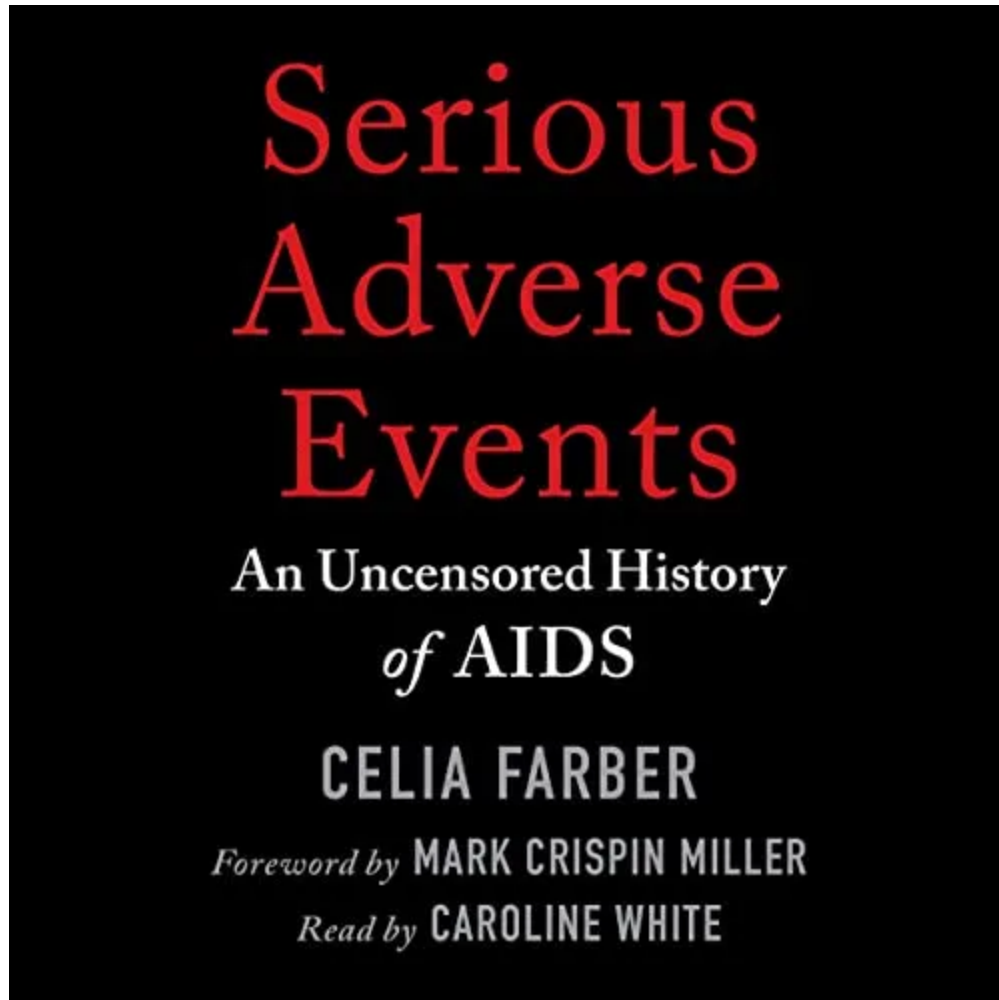

Why would Gallo risk his career so that he could be the one who would be known as the discoverer of HIV?

American AIDS Researcher

Robert Charles Gallo is known for his discovery of the AIDS virus, for developing a test for the virus that not only diagnoses cases but screens the blood supply, for development of AZT, the only effective AIDS medication, and for his relentless pursuit of an AIDS vaccine.

[26](#)

Gallo's original development of azidothymidine (AZT) was back in the 1960s to treat certain cancers. It was a disastrous project. But, somehow, AZT made a comeback with respect to AIDS treatment in the mid-1980s. The man who made the call on the use of the drug was the infamous Dr. Anthony Fauci:

Celia Farber, then an intrepid young reporter for SPIN magazine, was the only journalist to question the official narrative and dig into the science of AIDS. She reported on the “evidence” that was being continually cited and repeated by health officials and the press, the deadliness of AZT, and Dr. Fauci’s trials on children, infants, and pregnant mothers. Throughout, Farber’s reportage was largely ignored. She was maligned, maliciously attacked, and ultimately canceled.

[27](#)

With Fauci’s blessing, AZT was approved by the FDA. At the time, the incredible speed by which the drug was approved by the FDA was unheard of. Burroughs Wellcome,

which has since merged with BigPharma giant GlaxoSmithKline, owned the patent on AZT, and reaped enormous fortunes:

SCIENTIFIC AMERICAN

The high price tag kept many from receiving the new therapy: \$10,000/year. In 1992, Burroughs Wellcome reported sales of \$400 million for AZT, generating an enormous surge of profit for a drug that was developed and tested with heavy financial and scientific support from the U.S. government.

[28](#)

For some, AIDS was now generating vast fortunes.

At the time, AIDS was ripping through the world and terrifying humanity. The news of a potential cure did not need much persuasion. However, there were some very smart molecular biologists who were continuing their own research and observing the Klownshow that was unfolding around Fauci, Gallo, and AZT. They could smell bullshit:

November 1, 1994

Last Friday at an alternative medicine meeting in Greensboro, N.C., a Florida physician stood in the glare of television lights and held the hand of a young man infected with the human immunodeficiency virus. Squinting in the lights and a moment later from the pain, he stuck a 20-gauge hypodermic needle deep into the infected man's finger and quickly jabbed the bloody needle into his own hand. Twice.

The physician, Robert Willner, said he inoculated himself with the man's blood to draw attention to "the greatest scam ever perpetrated." Contrary to expert opinion, he declared that HIV does not cause AIDS.

"This is an innocent virus," Willner said in an interview soon after inoculating himself. Indeed, he said, it is the AIDS drug AZT that is the leading cause of AIDS today.

[29](#)

Ummm...WTF!??

We must remember that this was 30 years ago, when everyone was still trying to work out what was really going on with AIDS. But having a guy jabbing himself with HIV positive blood to prove his point? This man had taken things to the next level.

Dr. Willner was not alone with his hypothesis:

At the other end of the scientific spectrum is Peter Duesberg, a virologist at the University of California, Berkeley, and the king of skeptics when it comes to HIV and AIDS. For 10 years he has argued that in the search for a cause for AIDS, HIV has been framed.

"My opinion is that AIDS is not an infectious disease," he said. "All the evidence available to me indicates that {HIV} is just another harmless virus."

Long a lone voice among scientists, Duesberg gained a high-profile supporter last year in Kary Mullis, a Nobel prize winner in medicine who believes the search for an alternative cause of AIDS has not received the federal attention it deserves.

[30](#)

These men were on the other side of the AIDS argument to Fauci, Gallo, and the AZT factories. Kary Mullis, the inventor of the now infamous PCR test, developed a particular disdain for Fauci (3:07 minutes):

PCR Test Inventor Kary Mullis on Fauci

Kary Mullis makes a point about Fauci that many now instinctively know, especially after the last 4 years of the plandemic mania. More importantly, Mullis made his call on Fauci well before the plandemic emerged, because he unfortunately died in 2019.

So, if Mullis is correct, why is his invention (the PCR test) being used for HIV today?

☰ MENU

Stanford
MEDICINE

Health Care

Doctors, Clinics & Locations, Conditions & Treatments

Patients & Visitors ▼

Polymerase Chain Reaction (PCR) for HIV

[31](#)

If Mullis is wrong, then we must accept that the Nobel prize winner did not understand his own invention. If he is correct, then we must accept that the medical establishment

had no idea what they were doing, with respect to HIV.

This stunning claim by Mullis compels us to explore his assertions, along with those of Deusberg and the man who injected himself with HIV blood, Dr. Willner.

Once again, we must remind ourselves that the debate about the origins of AIDS was raging in the mid-1990s. It was Fauci and Gallo vs Mullis and Deusberg etc. Notably, at the same time this prize-fight was taking place, the proud pedophile, Gajdusek, found himself exposed:

Nobel Laureate Is Accused of Child Abuse

BALTIMORE, April 5 (AP) — Dr. Daniel Carleton Gajdusek, a Nobel laureate and a leading researcher at the National Institutes of Health, has been charged with abusing one of the dozens of children he brought home from his research trips to the South Pacific and whose education he paid for in the United States.

Dr. Gajdusek, who was charged on Thursday, denied the accusations of child abuse and perverted sex practices. His bail was reduced to \$350,000, from \$1 million, today at a hearing in Frederick, Md., about 45 miles west of Baltimore.

Associated Press

Dr. Daniel Carleton Gajdusek, arrested on child abuse charges.

[32](#)

Finally, the sick bastard was exposed for his heinous abuses. The man who had discovered kuru, which subsequently led to the discovery of deadly prions, had come to a swift demise. Unfortunately, we will probably never know who Gajdusek trafficked those poor little boys to, or the details of how they were used and abused. However,

when it comes to pedophiles, it is always interesting to know the company they keep. In this instance, Gajdusek had some loyal friends who posted bail for him:

The New York Times Buy Reprints from the NYT Store

TUESDAY, APRIL 9, 1996 PAGE 28 OF 84

Friends Put Up Cash For Scientist's Bail

FREDERICK, Md., April 8 (AP) — Dr. Robert Gallo, an AIDS researcher, was among five friends who put up \$350,000 for the bail of Dr. Daniel Carleton Gajdusek, the Nobel laureate accused of molesting a boy.

Dr. Gajdusek, 72, a scientist at the National Institutes of Health, left the Frederick County jail on Saturday evening, according to an officer who asked not to be identified.

Dr. Paul Brown, a colleague of Dr. Gajdusek's, posted \$250,720 of the bond, which was lowered from \$1 million. Dr. Brown accused the authorities of "a conspiracy to destroy" Dr. Gajdusek. Dr. Gallo and his wife, Mary Jane, came up with \$59,280, and another couple contributed \$40,000.

Agence France-Press

[33](#)

(Note: the Bill Clinton photo with a white rabbit was the image directly next to the NY Times article, as it appeared in the paper that day. There is no inference that Bill or the white rabbit were implicated in the trafficking and ritual sexual abuse of young children from a third world nation.)

Gallo was either extremely close to Gajdusek, or found himself somehow "compelled" to cough up \$60,000 for the pedophile's bail. Gallo had a lot going on during these years; he was professionally disgraced, embroiled in a hot debate about the origins of AIDS, and also posting bail for his disgraced pedo friend.

Presumably, Gallo and Gajdusek's relationship stemmed back to their days at Fort Detrick. Gallo was with Litton Bionetics, leading their research into viruses and cancers. Gajdusek was a military virologist who worked with the NIH after his discovery of kuru, which later turned out to be prions.

During the 90s, the real thorn in Gallo and Fauci's side was Kary Mullis. His knowledge about his own PCR invention was an extremely awkward narrative that contradicted what the scientific establishment were pushing. If Mullis was correct, and his PCR test was useless for detecting HIV, then what exactly was it that Gallo and Fauci were trying to detect?

[34](#)

As it turns out, at about the same time the HIV/AIDS debate was raging, biochemical research was trying to develop a PCR technique to detect prions, which would be a huge advancement in the battle against neurodegenerative diseases.

Could it be that the PCR test for HIV was simply a test to detect prions?

Kurious Kuincidences

The missionaries and police constables in New Guinea observed a correlation between the native ritual of eating dead people at funerals, and the future outbreaks of kuru.

Similarly, we can look back and observe these strange events as they unfolded over time. When sets of events emerge as coincidences, we note them as a *potential* correlation. By no means does correlation amount to causation, but causation, by definition, will always present itself as correlation.

Therefore, like the missionaries, we hunt for curious coincidences in the hope of finding a new discovery, or two.

We found it curious that pedophile biologist and kuru expert, Daniel Gajdusek, served his military service as a research virologist, immediately after Nazi scientists had been smuggled into the US via Operation Paperclip. As we discovered in the Urania series, many Nazis were ideological pedophiles and there were multiple weapons research programs being carried out in Nazi camps, including bioweapons.

We found it curious that after his military service, Gajdusek did not travel to third world countries in search of cures. Instead, he travelled to third world countries in search of diseases that were wiping out entire populations. After enthusiastically exploring the false hypothesis that kuru was a sexual disease, Gajdusek managed to work out that kuru was a transmissible pathogen, and his career at Fort Detrick took off.

We found it curious that Gajdusek's experiments with kuru were claimed to have been what triggered the emergence of Simian Immunodeficiency Virus (SIV), which is considered the parent to HIV/AIDS.

We found it curious that, during the 1980s, scientists were observing the frightening similarity between kuru and AIDS. Both had incubation periods of a similar duration, and when the disease finally expressed itself, the gruesome death of the patient was 100% assured.

We found it curious that the culprit that caused kuru had been isolated; it was a misfolded protein known as a "prion". When a kuru victim started to degenerate, it was due to these prions shooting through their brains like tiny bullets, slowly destroying the brain and central nervous system. We found it curious that researchers have discovered something decidedly similar with respect to AIDS:

Free PMC article

Abstract

HIV-1 enters the CNS soon after peripheral infection and causes chronic neuroinflammation and neuronal damage that leads to cognitive impairment in 40-70% of HIV-infected people. The nonpathogenic cellular isoform of the human prion protein (PrP^C) is an adhesion molecule constitutively expressed in the CNS. Previously, our laboratory showed that shed PrP^C (sPrP^C) is increased in the cerebrospinal fluid of HIV-infected people with cognitive deficits as compared with infected people with no impairment.

[35](#)

The NIH goes on to note that this characteristic of HIV-1 even has its own name - NeuroAIDS:

NeuroAIDS: characteristics and diagnosis of the neurological complications of AIDS

PMID: 18288880 DOI: [10.1007/BF03256266](https://doi.org/10.1007/BF03256266)

Abstract

The neurological complications of AIDS (NeuroAIDS) include neurocognitive impairment and HIV-associated dementia (HAD; also known as AIDS dementia and HIV encephalopathy).

[36](#)

We found it curious that Gajdusek developed a close friendship with Robert Gallo while working for the NIH at Fort Detrick. Their relationship was so close that Gallo chipped in to bail out Gajdusek after he was accused of pedophilia.

Recall that Gallo worked for Litton Bionetics at Fort Detrick, a company which was granted contracts by the federal government in the “War on Cancer”. Litton Bionetics was given complete access to the recently closed bioweapons laboratories at Fort Detrick, and proceeded to experiment with a plethora of “viruses” and other pathogens in the hope to cure cancer.

We found it curious that during Gallo’s tenure, the drug AZT was developed as a means to battle cancer using “chemical therapies”. The drug was a joke, but during the peak of the AIDS scare in the 1980s, Gallo’s friend, Dr. Anthony Fauci, started trials with AZT on HIV patients. He injected men, pregnant women and children, and the results were terrifying. Regardless, with the urging by Fauci, the FDA rushed through an approval granting the use of AZT.

We found it curious that molecular biologists in the 90s were claiming that HIV had very little to do with AIDS, and that AZT was potentially causing AIDS. Kary Mullis claimed that his PCR test was useless in detecting HIV, however, during the 90s, the PCR test was being developed to test for prions.

We found it curious that there are genuine fears that prions could be used as a potential bioweapon. They are infectious, hard to detect, potentially created synthetically, and can exhibit gain-of-function capabilities.

Abstract

Prion disease is a rare, fatal, and often rapidly progressive neurodegenerative disease. Ten to fifteen percent of cases are caused by autosomal dominant gain-of-function variants in the prion protein gene, PRNP.

[37](#)

We also find it curious that despite Robert Gallo's work on cancer at Fort Detrick in the 1970s and his relationship with his prion-hunting friend, Gajdusek, that it is only a recent discovery about the role prions play with respect to cancers:

The human prion protein (PrP) is known to cause neurodegenerative diseases and has now been found to be up-regulated in multiple cancers. PrP expression in cancer cells contributes to cancer progression and resistance to various cancer therapies. Epigenetic changes in gene expression and hyper-activation of MAP kinase (MAPK) signalling, processes that in lower eukaryotes are affected by prions, play important roles in oncogenesis in humans.

[38](#)

Gajdusek first travelled to New Guinea in the 1950s. However, it was not until the 1980s that prions were isolated and known to be the cause of kuru disease. It has since been discovered that most fatal neurodegenerative diseases contain prions.

Real medical research continues to slowly catch up to the discoveries of Gajdusek and Gallo. While nothing is yet conclusive, there are speculations on the role prions play in many other diseases:

[41](#)

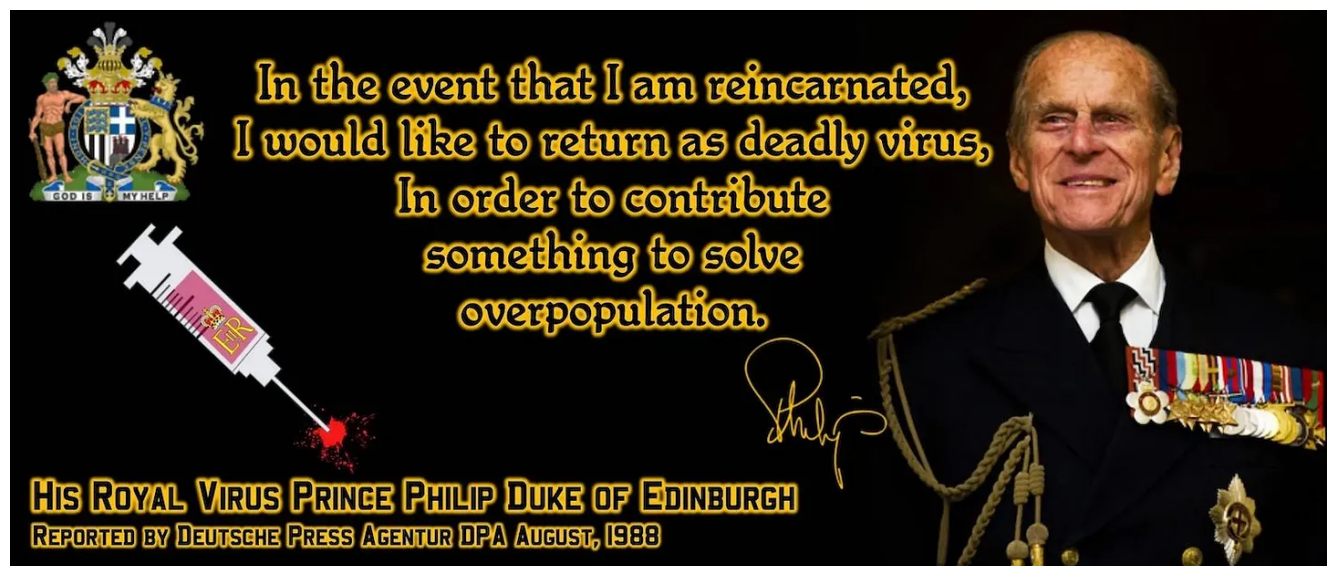

When the CIA operation MKNAOMI was brought into the light by the Senate Intelligence Committee in 1975, there was the reference to the transfer and storage of bioweapon agents to a commercial laboratory. In yet another curious coincidence, around the same time, a commercial laboratory was installed in Fort Detrick's old bioweapons labs.

There are an awful lot of coincidences occurring when it comes to pandemics and disease.

A question beckons; is the prion being deployed for a darker purpose?

A Kuru-pocalypse?

In our *An Ode to the Prussian Pickle* series, we paid homage to Charles and his love for nature. In particular, he wishes that humanity devolve back to the living standards of the Transylvanians – one of the poorest regions in Europe. Armed with genes he inherited from Count Dracula, Charles appears determined to carry out the will of his late father, Prince Philip:

The obsession with population control by the disconnected aristocracy has plagued the planet for centuries. Their theories have been continually debunked, and yet they press on relentlessly. What if Philip didn't reincarnate as a virus, but instead decomposed into a steaming pile of prions?

AMERICAN COUNCIL

By Steve Schow — March 20, 2017

The Next Plague: Prions Are Tiny, Mysterious And Frightening

Prions: Tiny, Mysterious, And Frightening

Prion diseases are rare progressive neurodegenerative disorders that affect both humans and animals. They are distinguished by long incubation periods, characteristic spongiform (Swiss cheese) changes in brain and spinal cord tissues associated with neuronal loss, and a failure to induce inflammatory response.

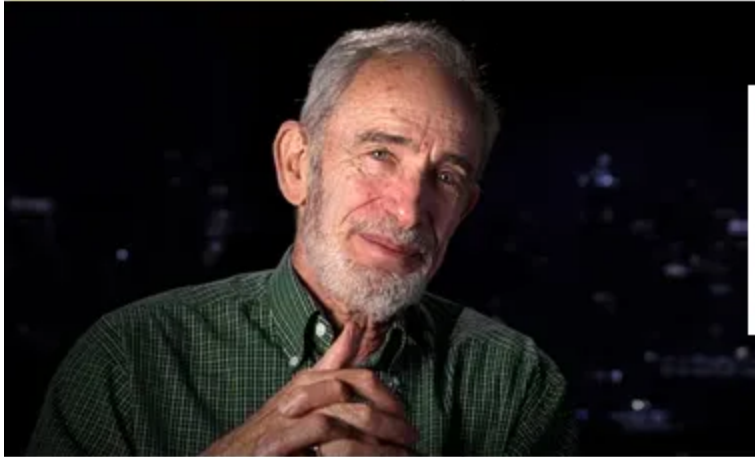

Aberrant prions are a perfect doomsday biological warfare agent. The action may be slow to unfold, but the agent is 100% fatal. It is technologically feasible to place genes for pathogenic prion mutants into vector organisms to target humans.

. Persistent high exposure to misfolded prions in the bowel might considerably shorten the incubation period for the onset of disease. Ultimately lethal doses of these aberrant prion proteins would eventually extinguish human life on earth.

[42](#)

This is the stuff of nightmares, but not for deranged depopulationists like [Paul Ehrlich](#). In 1968, he wrote the book [“The Population Bomb”](#). It instilled so much fear into the public consciousness, that [Henry Kissinger decided to also write his thoughts on the subject, and suggested that population control is an essential part of national security](#).

Regardless, in 2018, Ehrlich returned to the spotlight with a strong message for the global community:

Interview**Paul Ehrlich: 'Collapse of civilisation is a near certainty within decades'****Damian Carrington**

It will take a very long time to humanely reduce total population to a size that is sustainable

Prof Paul Ehrlich of Stanford

The world's optimum population is less than two billion people - 5.6 billion fewer than on the planet today, he argues, and there is an increasing toxification of the entire planet by synthetic chemicals that may be more dangerous to people and wildlife than climate change.

[43](#)

This is crazy stuff, especially when we consider how completely incorrect his predictions have been over the last 50 years. Why are these people so determined to see the world depopulate as quickly as possible, and why do they appear so confident that it will happen?

The answer may lie in the recent research regarding deadly pathogens:

NEW YORK POST

Chinese lab crafts mutant COVID-19 strain with 100% kill rate in 'humanized' mice: 'Surprisingly' rapid death

By Katherine Donlevy

Published Jan. 16, 2024 | Updated Jan. 17, 2024, 7:26 a.m. ET

In a Wuhan-esque study, Chinese scientists are experimenting with a mutant COVID-19 strain that is 100% lethal to "humanized" mice.

The deadly virus — known as GX_P2V — attacked the brains of mice that were engineered to reflect genetic makeup similar to people, according to a study shared last week out of Beijing.

In the days before their deaths, the mice had quickly lost weight, exhibited a hunched posture, and moved extremely sluggishly.

[44](#)

Hmmmm.... A new Covid strain that attacks the brains, and then results in rapid weight loss and sluggishness? Where have we heard of that experiment before? Ah yes, from the pedophile Gadjusek. If it walks and talks like kuru, it is most likely a prion.

Why would the CCP be working on a new strain of Covid to produce a prion-like disease?

Medical researchers are beginning to explore this peculiar coincidence as well:

A Potential Role of the Spike Protein in Neurodegenerative Diseases: A Narrative Review

Human prion protein and prion-like protein misfolding are widely recognized as playing a causal role in many neurodegenerative diseases. Based on in vitro and in vivo experimental evidence relating to prion and prion-like disease, we extrapolate from the compelling evidence that the spike glycoprotein of SARS-CoV-2 contains extended amino acid sequences characteristic of a prion-like protein to infer its potential to cause neurodegenerative disease. We propose that vaccine-induced spike protein synthesis can facilitate the accumulation of toxic prion-like fibrils in neurons.

‘Spikeopathy’: COVID-19 Spike Protein Is Pathogenic, from Both Virus and Vaccine mRNA

The SARS-CoV-2 spike protein receptor binding domain has prion-like properties, is the only coronavirus with such properties, and has enhanced virion binding affinity to the ACE-2 receptor and thus increased human infectivity and transmissibility [189]. The full spike protein with intact receptor binding domain (RBD) S1 subunit, if it crosses the BBB, therefore has prion-like properties that warrant further research into possible pathogenic effects.

[46](#)

So, we now live in a world where prions are being discovered everywhere, and prion-like brain infections are actively being developed in China, for some strange reason.

But prion research is not only happening with humanized mice in China. In North America and Europe, a deadly disease is ripping through the deer, elk and moose populations, where the poor animals become “zombies”:

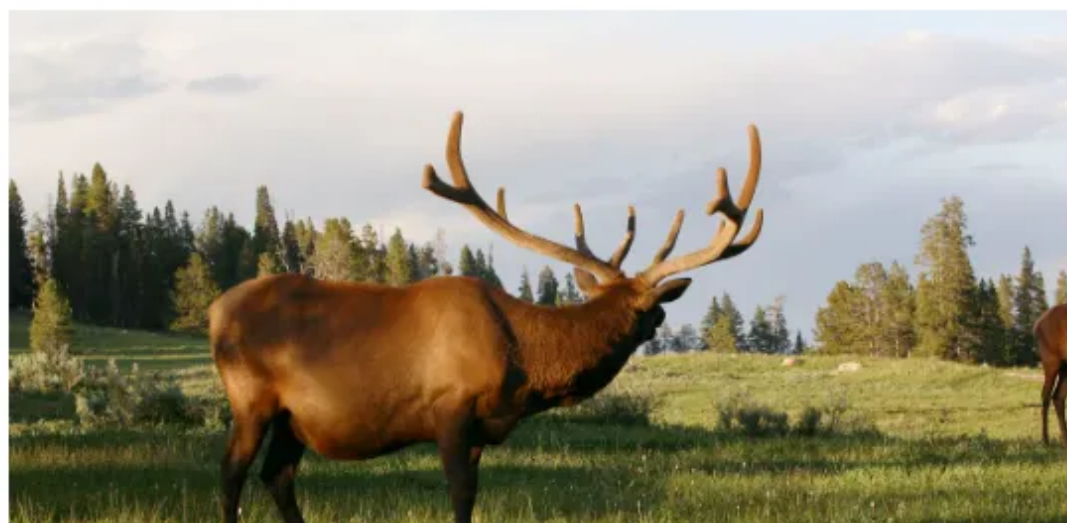

'Zombie' Deer Disease Is Spreading — and Experts Worry It Could Jump to Humans

Chronic wasting disease has been detected in deer in at least 32 states.

By [Don Rauf](#)

 Fact Checked on December 28, 2023

An infectious and fatal illness that damages the brain and nervous system has been spreading among deer in the United States.

The illness has earned the nickname “zombie deer disease” because it eats away at the brain and causes stumbling, excessive drooling and head lowering, blank stares, listlessness, and lack of fear of people,

There is no vaccine or treatment, and the disease is always fatal.

[47](#)

Sadly, the deer’s brains are slowly getting blown out by prions, making them wander around aimlessly, without fear. This reminds us of a crazy scene in the cheap fear-mongering Netflix film, *Leave the World Behind* (1:00 minute):

Leave the World Behind 2023 #bestmoments #...

The deer were obviously suffering from the prion “Zombie Deer Disease”. At the same time in the movie, Julia Robert’s son’s teeth were rapidly falling out of his mouth, and

they were seeking emergency help. As it turns out, rapid tooth loss might have something to do with prions also:

Tooth Loss and Alzheimer's Disease

Oral Disease and Nutrition (F Nishimura, Section Editor) | Published: 08 April 2019

Volume 6, pages 82–88, (2019) [Cite this article](#)

Tooth loss in the elderly may cause neurodegeneration and act as a trigger for the progression from MCI to dementia. Moreover, neurodegeneration due to tooth loss is thought to exacerbate the accumulation of AD-specific amyloid- β and phosphorylated tau proteins, which worsen the pathological condition of AD.

[48](#)

[Research into Alzheimer's is slowly discovering that it may be understood as a "double-prion disorder"](#).

So, is the garbage Netflix movie insinuating that the young boy's teeth loss is due to a prion disease that he had potentially caught from the deer who are dying from prion disease? If so, that would mean that, somehow, the deer prion has mutated to infect humans. Surely not:

Abstract

Prions cause infectious and fatal neurodegenerative diseases in mammals. Chronic wasting disease (CWD), a prion disease of cervids, spreads efficiently among wild and farmed animals.

Our results are the first evidence that CWD can infect humans with a distinctive clinical presentation, signature, and tropism, and might be transmissible between humans while current diagnostic assays might fail to detect it. These findings have major implications for public health and CWD management.

SMART NEWS

'Zombie Deer Disease' Documented in Yellowstone for the First Time

The neurological condition, called chronic wasting disease, has a 100 percent fatality rate in the deer, moose and elk it infects

Margaret Osborne

Daily Correspondent

November 30, 2023

[50](#)

Why anyone would be interested in infecting humans with a deer zombie disease while it is still running rampant through deer, moose and elk populations, is beyond explanation. But that is exactly what appears to be happening.

This puts a new spin on the Obama Netflix movie, don't you think?

At this point some may be wondering what sort of fresh hell awaits humanity. If nature only manifested disease and death, without any cure, we would already be a biologically dead planet. This is most certainly not the case, which means we must ask another important question.

What if Cures Already Exist?

Prions are nasty, scary things that could easily be deployed as bioweapons. They can also be made invisible by blaming the disease on something else. This is what Peter Duisberg claimed about HIV and AIDS. However, is there anything out there that could help people who may be in the incubation phase of a prion disease, unaware of the terrible demise they may be about to face?

Researchers have been working hard for decades to find something that could prevent or significantly slow down the prion disease:

• August 13, 2001

UCSF study finds two old drugs may help fight prion diseases

By Jennifer O'Brien

In their study of mouse cells infected with prions, the UCSF researchers determined that quinacrine, approved to treat malaria and giardiasis, and chlorpromazine, approved to treat schizophrenia and other psychotic conditions, inhibit the conversion of normal prion protein into the disease-causing form. In other words, through biochemical analysis, the researchers determined that the drugs "cured" the infected cells.

When he discovered that phenothiazines were derived from methylene blue, a dye used in England in the 1850s, he examined other derivatives of the dye and determined that one, quinacrine, had a similar tricyclic scaffold and the same side chain structure as chlorpromazine.

[51](#)

As it turns out, methylene blue is being looked at with respect to the latest plandemic:

Methylene Blue Prevents And Reverses Prion Disease, Amyloid and Rubbery Clot Formation, Binds Hydrogel Polymers, Dissolves Nanotech Building Blocks

ANA MARIA MIHALCEA, MD, PHD
17 DEC 2023

[52](#)

One of the toughest doctors in the world uncovering the madness of the plandemic, is Dr. Peter McCullough. With respect to the "spike protein", he suggest the following (1:14):

Detox from Spike Proteins: Here's How in 74 Sec...

These are interesting ingredients.

There are studies looking at how Nattokinase can degrade prions. [53](#)

There are also studies showing the effectiveness of Curcumin in reducing the fibrillation of prions. [54](#)

There are also studies showing the power of Quercetin against prions. [55](#)

There is also Dr. Judy Mikovits, the research scientist who worked with Anthony Fauci and featured in the documentary, *Plandemic*. She provides her insights on how to deal with what she calls, “Vaccine AIDS”:

Purinergetic Modulation

This class will teach you the difference between suramin and ivermectin and the important role purinergetic modulators play in healing COVID-19, Autism, Cancer, autoimmune disease and Vaccine-AIDS.

[56](#)

While research into ivermectin is also providing valuable insight into treatments of various cancers, suramin has another interesting effect on prions:

> [J Cell Sci. 2005 Nov 1;118\(Pt 21\):4959-73. doi: 10.1242/jcs.02609. Epub 2005 Oct 11.](#)

Charged bipolar suramin derivatives induce aggregation of the prion protein at the cell surface and inhibit PrPSc replication

Max Nunziante ¹, Claudia Kehler, Elke Maas, Matthias U Kassack, Martin Groschup, Hermann M Schätzl

[57](#)

Whether it is ivermectin, quercetin, suramin, nattokinase, curcumin or methylene blue, all of these compounds share a few things in common:

- They were viciously demonized as treatments during the plandemic,
- They are all now becoming recognized therapies for those affected during the plandemic, particularly those who were vaccinated,
- They are cheap and unpatentable products, and therefore make no profit for pharmaceutical companies, and
- They are all being used to try and treat, or potentially cure, the nightmare of prion diseases.

These are certainly a curious set of coincidences. However, we are simply like the missionaries and police constables observing the origins of kuru disease in New Guinea. We are not mad-scientists looking to adopt 50 young boys from the 3rd world, and can only rely on our God-given senses to try and make sense of the reality we find ourselves in.

This brings us toward the end of our mind excursion. All of these curious coincidences brought up an idea for a movie which we would like to pitch to our readers as the conclusion to this #PrussiaGate article:

MOVIE: Leave the New World Order Behind (SciFi – Adult Content)

PLOT PITCH:

After WWII, a top secret Nazi bioweapons program was discovered. The program researched and developed deadly pathogens that could potentially wipe out entire nation states, or target specific races. Rogue elements in the US military decided to transfer and continue the program in America, along with some of the Nazi scientists.

Due to the illegal nature of the program, secrecy was paramount. Recruiting scientists that could maintain the secret was a problem, until the Nazis suggested recruiting pedophile scientists. They could easily be controlled via blackmail, and their desire to rape children proved that they had no empathy for humanity, or animals. They would make the perfect researchers for humanity-ending bioweapons.

The program was a huge success. A deadly prion disease was isolated from the jungles of New Guinea. The bioweapons program was transferred to private corporations, who could not only store the bioweapon agents covertly, but also generate enormous profits. Synthetic compounds could be patented ahead of time to treat diseases that were yet to appear in the public. Trillions of dollars were made and, in order to maintain secrecy, the operation expanded their recruitment to include politicians, judges, law enforcement, CEOs, journalists, scientists, and even actors. They were recruited using the same pedophile strategy as before, and were deployed to form a protective layer of propaganda, Klownshows and kangaroo courts, all designed to take out anyone who would dare expose the conspiracy.

Human beings became nothing more than sheep; a bank of disease incubators and profit-machines for a network of self-described “globalist elites”.

However, the strategy to keep the conspiracy silent would eventually fail. A handful of whistle-blowers gradually exposed a variety of the scams that were being deployed against humanity. A few investigators, journalists and police exposed huge pedophile networks involving the rich, powerful and famous. A light began to flicker as a small portion of the public began to Awaken to the idea of a horrible, invisible enemy.

Gradually, more and more evidence started bringing the evil network into the light. Code words and symbols used by the pedophile-elite were revealed. Citizen journalists, disgusted by what they were uncovering, continued triangulating events to expose even more horrendous secrets, and crimes. At every turn, whenever the network of 'elites' tried to cover things up, things only got worse.

The Awakening began to grow exponentially. Political movements declaring a return to law and order started to gain power in governments around the world. A man running for President expressed his desire to apply the death penalty to convicted pedophiles. They tried to stop him, and yet he still became President. They tried everything to remove this President and suppress the will of the people. These actions only served to Awaken more and more people.

However, the invisible enemy had one last weapon in their possession. They developed the mother of all bioweapons - The Kraken of misfolded proteins; the prion. Knowing that the neurodegenerative effects of the prion would take a few years to manifest, they used what was left of their propaganda machine to seed it into public conscious.

Pretending to run a simulation of a potential new pandemic that was about to hit the world, the idea of a deadly brain infection was used as the test case:

DISEASE X

Clade X Simulation

The Clade X simulated pandemic went like this:

"Patients, including US military members, were showing up at the hospital in Landstuhl with fever, cough, and confusion. Some patients were ending up on respirators; others fell into comas. Initially, it looked like viral encephalitis. But it soon became clear this virus was something new—and lethal. It had the ability to be transmitted from person to person through the air, a 5-7-day incubation period, and a high fatality rate."

But the Awakened were having none of it. With new eyes, they could see everything that was unfolding, and took appropriate steps to end the madness.

One side used panic, fear and force to create digital gulags that were ringfenced by desperate illegal migrants.

The other side used truth, a parallel economy, and cheap generic and natural cures. They provided an opportunity to leave the New World Order behind.

The choice to know, would be given to every individual. But everyone had to choose.

And that's when real battle for the survival of humanity begins.....

We can't give away how the movie ends, but we think you will like it.

The End

52 Humanity United Now - Ana Maria Mihalcea, MD, PhD

Methylene Blue Prevents And Reverses Prion Disease, Amyloid and Rubbery Clot Formation, Binds Hydrogel Polymers, Dissolves Nanotech Building Blocks

Image: Methylene blue inhibits nucleation and elongation of SOD1 amyloid fibrils In the last few substacks I have been talking about prion like proteins,

Amyloid like polymers, how they are used in Nanotechnology and the relationship to the C19 bioweapon. This is to explain the recent research findings by Dr. Diana Wojtkowiak that she did on the deceased...
